2026-05-10 검증 통화 2건 — 종합 분석 + Batch Fix Plan

작성일: 2026-05-10 EOD **대상**: JM Tech One Backend (다음 세션에서 batch fix) **목적**: Billy Wonka + Jason 두 검증 통화 분석 + 발견된 8개 gap 우선순위 정리 + 다음 세션 batch fix plan

---

0. Executive Summary

항목	결과
통화 1 (22:25 UTC)	Billy Wonka, Croissant $4.50, 5분 41초, **87/100**
통화 2 (22:43 UTC)	Jason (returning customer), Cafe Latte $6.25, 5분 6초, **80/100**
두 통화 평균	**84/100**
검증된 fix	**10개 (이전 P0-A/B/C/D + Wave A.3 + Bug #2 모두 통과)**
신규 발견 Gap	**8개** (G1-G6 + P1 cron + P2 call_log)
다음 세션 작업 견적	**~4 founder-hours** (P0 1h + P1 2h + P2 30min + 검증 30min)

한 줄: P0-A/B/C/D + CRM Wave 1 + Bug #2 모두 라이브 검증 통과. 잔여 Gap 8개는 batch 1회 fix 가능 — 다음 세션 fresh context 권장.

---

1. 통화 1 — Billy Wonka (22:25 UTC, 5분 41초)

Transcript 핵심 turns (색상 코드 적용)

```
You: Yes, and then can we add a coffee?
Agent: Got it — placing your order now and sending a payment link to your phone. If you'd like

Agent: Confirming one croissant for Billy Wonka for $4.50 — is that right?

Agent: Got it, we'll go with whole milk for your iced cappuccino. So your order will be one cro

You: Can I add a pizza?
Agent: We don't offer pizza, but the kitchen has already started that order, so I can't change

You: No, do you guys have pizza?
Agent: We don't have pizza on our menu, just coffee, pastries, and a few breakfast and lunch it

You: Can I get the burrito?
Agent: We don't have burritos, but I'd be happy to help you with something we do offer.

You: How about the breakfast burrito?
Agent: We don't have a breakfast burrito, but we do have a breakfast sandwich if that works for

You: Can I speak in Korean?
Agent: 물론이죠, 한국어로 말씀하시면 됩니다.

You: How about, can I speak in Spanish?
Agent: 물론입니다, 스페인어로 말씀하셔도 돼요.     [⚠ Gap 2: KO 응답]

You: Olá.
Agent: Hola, ¿en qué puedo ayudarte hoy?

You: Can I speak in English?
Agent: Sure, we can switch to English. What else can I help you with today?

You: What is my total?
Agent: You have 1 croissant for $4.50, and the payment link is on its way.

You: And can I change my order?
Agent: The kitchen's already started your croissant order, but I can cancel it and place a new

You: Yes.
Agent: Just to confirm—you want to cancel your order for 1 croissant for $4.50, is that right?

You: يا
Agent: Got it — your order has been cancelled on our side. The kitchen had already started, so

You: Okay, thank you, bye.
Agent: Thanks, see you soon.

(없음)	**`create_order` for drip coffee**	🔴 **Gap 4 — lost order**

신규 검증된 Fix (이전 8개 + 2개)

Fix	증거
(이전 8개 동일)	
CRM returning recognition	returning=True, visits=1 (이전 22:25 통화 누적)
Modify_too_late 후 직접 cancel 제안	turn=12-14 "add to order" 적극 제안, modify→too_late 후 즉시 "cancel + new?" 제안 (Gap 1 일부 자동 개선)

---

3. 8개 Gap 종합 — Batch Fix 우선순위

#	Gap	통화	핵심	우선순위	작업 시간
G4	Returning customer over-asking → lost order	Jason	turn=22-24 name/email 불필요 re-prompt → caller 끊음	**P0**	30min
P1	no_show_sweep cron 미작동	(DB)	pending 5건 + fired_unpaid 5건 5일째 정리 X	**P0**	1h
G1	modify_too_late fallback flow	Billy	"별도 새 transaction 제안" — Jason에서 일부 자동개선됨	P1	30min
G6	Mid-call email update DB 미반영	Jason	customers 테이블 update 별도 필요	P1	30min
P2	call_log_id=None	(DB)	OpenAI Realtime 통화 → call_logs 미연동	P1	1h
G2	Spanish 요청에 KO 응답	Billy	turn=28 1회 fail, self-correct (Olá → Spanish)	P2	15min
G3	메뉴 외 거절 4 turns 반복	Billy	pizza/burrito 동일 메시지 반복	P2	15min
G5	Farsi STT misrecognition	Jason	turn=12 'چگونه، یوف...' Whisper 한계	P2	15min (system prompt low-conf rule)

합계: P0 1.5h + P1 2h + P2 45min = **~4.25 founder-hours**

---

4. 다음 세션 Batch Fix Plan (상세)

Phase A — P0 (즉시 매출 영향)

A.1 — G4 Fix (System Prompt: Returning Customer Fast-Path)

File: `backend/app/api/voice_websocket.py` (system prompt assembly) **위치**: GLOBAL RULES 또는 CORE TRUTHFULNESS INVARIANTS 섹션

추가할 룰:

```
=== RETURNING CUSTOMER FAST-PATH ===
If CRM context indicates returning=True AND a name is already known:
  - DO NOT re-ask for name. Use the known name directly.
  - DO NOT re-confirm email mid-call if already verified in THIS call.
  - When caller says "send me total" / "yes ready" / equivalent confirm:
    fire create_order tool IMMEDIATELY without additional re-prompts.
```

검증: - 같은 phone (+1-503-800-8015)으로 검증 통화 - Order confirm 시 name/email re-prompt 0번이어야

A.2 — no_show_sweep Cron 검증 + 활성화

파일: `backend/app/services/bridge/no_show_sweep.py`

작업: 1. cron 또는 scheduled task 등록 상태 확인 (launchd? systemd? endpoint trigger?) 2. 안 돌고 있으면 활성화 (예: `/admin/cron/no_show_sweep` POST 호출 또는 schedule) 3. 5+5 stale tx 수동 sweep 실행 4. State 변경 검증 (pending → no_show / fired_unpaid → no_show)

확인 쿼리:

```
SELECT state, COUNT(*) FROM bridge_transactions
WHERE store_id='7c425fcb-...' AND created_at > NOW() - INTERVAL '7 days'
GROUP BY state;
```

Phase B — P1 (UX + 정합성)

B.1 — G1 Fix (System Prompt: modify_too_late → New Transaction 자동 제안)

File: 동일 (voice_websocket.py system prompt)

추가할 룰:

```
=== MODIFY_TOO_LATE FALLBACK ===
When modify_order returns ok=False reason=order_too_late:
  - The current order is locked. Caller likely still wants the new item.
  - Offer TWO clear options in ONE sentence:
    1) "I can cancel your current order and place a new combined one"
    2) "Or I can keep this order and create a separate new order for the additional item"
  - Let caller pick. Do not repeat the offer more than once.
```

B.2 — G6 Fix (Mid-Call Email Update DB Persistence)

File: `backend/app/services/crm/customer_lookup.py` or similar

작업: - 새 함수: `update_customer_email(phone, email)` — `customers` 테이블 또는 별도 store에 phone→email mapping persist - voice_websocket에서 caller가 email update 요청 시 (recital 끝나면) 호출 - 다음 통화 customer_lookup 시 최신 email 반환

B.3 — P2 Fix (call_log_id wire-up)

File: `backend/app/api/realtime_voice.py`

작업: - OpenAI Realtime 통화 시작 시 `call_logs` row INSERT (call_id=callSid, store_id, start_time) - 통화 종료 시 UPDATE (duration, call_status, sentiment, summary, transcript) - bridge_transactions.call_log_id에 해당 row id 연결

검증: - 다음 검증 통화 후 `call_logs` table 새 row + `bridge_transactions.call_log_id != NULL`

Phase C — P2 (Polish)

C.1 — G2 (Language Re-detection per Turn)

System prompt에 추가:

```
LANGUAGE POLICY: Detect language EACH TURN from caller's latest utterance,
NOT conversation history. If caller asks "Can I speak in [language]?",
switch to that language IMMEDIATELY for the next reply.
```

C.2 — G3 (Menu-Out-of-Scope Redirect After 2 Attempts)

System prompt에 추가:

```
MENU-MISS REDIRECT: After 2 consecutive menu-out-of-scope queries, do not
list reasons again. Instead pivot: "Let me suggest our top 3 popular items:
[X], [Y], [Z]. Which sounds good?"
```

C.3 — G5 (Low-Confidence Re-Ask)

System prompt에 추가:

```
LOW-CONFIDENCE RECOVERY: If caller's last utterance was clearly not a
valid menu/order term in the active language (e.g. gibberish, foreign
script unrelated to the menu), respond: "Sorry, I didn't catch that —
could you repeat?" instead of inferring intent from prior context.
```

Phase D — 검증 통화 3건

배치 fix 후 다음 시나리오 검증: 1. **Returning customer** (+1-503-800-8015) drip coffee 주문 → name/email re-prompt 0번 → create_order fire (G4 검증) 2. **Modify too late + new transaction**: order 1개 fire 후 추가 item 시도 → "keep + new" 옵션 제안 → 별도 transaction (G1 검증) 3. **Multi-language switching**: KO → EN → ES → JA → ZH 5 lang 순차 (G2 검증)

---

5. Frontend Claude 충돌 방지

다음 세션 작업 영역: **`backend/* + docs/*` 만**. Frontend 변경 없음.

Frontend Claude에 전달할 메시지:

```
2026-05-10 두 통화 분석 완료. P0+P1+P2 fix는 다음 backend 세션에서 batch 처리.
Frontend 변경 없음. /admin/architecture-proof 페이지 작업 그대로 진행 OK.

backend가 다음 세션에 push 예정 changes (frontend 영향 0):
- voice_websocket.py system prompt rules 추가 (5-7개)
- realtime_voice.py call_logs wire-up
- no_show_sweep cron 활성화
- customer email persistence 함수 추가

push 후 git pull --rebase 한 줄로 동기화 가능.
```

---

6. 다음 세션 시작 Prompt (그대로 복사)

```
2026-05-10 두 검증 통화 분석 완료. Batch fix 진행하자.

먼저 다음 파일들 순서대로 읽고 컨텍스트 파악:
1. docs/validation/2026-05-10_two-call-analysis/TWO_CALL_ANALYSIS.md (이 분석 + 8 Gap + Batch Pla
2. handoff.md (직전 세션 EOD 상태)
3. ~/.claude/projects/-Users-mchangpdx-jm-voice-ai-platform/memory/session_resume_2026-05-10_pi

그 다음 환경 점검:
- pwd (모노레포 루트)
- git log --oneline -5 (최신 commits)
- curl health (local + ngrok)

배치 fix 진행 (4 founder-hours 견적):

Phase A — P0 (immediate revenue impact):
- A.1: G4 — voice_websocket.py system prompt에 RETURNING CUSTOMER FAST-PATH 룰 추가 (30min)
- A.2: no_show_sweep cron 검증 + 활성화 + 5+5 stale tx 수동 sweep (1h)

Phase B — P1 (UX + integrity):
- B.1: G1 — system prompt MODIFY_TOO_LATE FALLBACK 룰 추가 (30min)
- B.2: G6 — customer email persistence (customer_lookup.py 확장) (30min)
- B.3: P2 — call_log_id wire-up (realtime_voice.py call_logs INSERT/UPDATE) (1h)

Phase C — P2 (polish):
- C.1: G2 — system prompt LANGUAGE POLICY per-turn (15min)
- C.2: G3 — system prompt MENU-MISS REDIRECT (15min)
- C.3: G5 — system prompt LOW-CONFIDENCE RECOVERY (15min)

Phase D — 검증 통화 3건:
- D.1: returning customer drip coffee (G4 검증)
- D.2: modify_too_late + new transaction (G1 검증)
- D.3: multi-language switching (G2 검증)

각 phase 끝마다 pytest + curl health. 모든 phase 완료 후 commit (명시적 path: backend/* + docs/*) + pu

⚠️ Frontend Claude 충돌 방지:
- backend/* + docs/* 만 수정
- git add 명시적 경로 (절대 git add . 금지)
- pull 전 자기 변경 commit/stash 먼저

⚠️ 보호 구역 (절대 건드리지 말 것):
- Wave A.3 (16개) + CRM Wave 1 (9개) + P0-A/B/C/D (4개) + Bug #2 (1개) + KBBQ Day 1 (templates/kb
- 라이브 fix는 system prompt rule 추가 (additive) + 신규 함수만. 기존 함수 시그니처 변경 금지.

careful change protocol: 분석 먼저, 코드 변경 전 사용자 승인. 더블체크하고 신중하게.
```

부록 A — 두 통화 검증 점수 비교

Dimension	Call 1 (Billy)	Call 2 (Jason)	차이
Connection stability	10/10	10/10	—
Tool dispatch	10/10	9/10	-1 (Gap 4 lost order)
POS integration	10/10	10/10	—
Order decomposition	9/10	10/10	+1
CRM context	10/10 (first-time)	10/10 (returning 인지)	—
CRM context 활용	N/A	4/10 ⚠️	(over-asking)
Multi-language	7/10	7/10	—
Menu-out-of-scope	6/10	9/10	+3 (이번에는 1-2 turn)
Modify→fallback	5/10	8/10	+3 (자동 개선)
Email reconcile	10/10	10/10	—
종합	**87/100**	**80/100**	-7

부록 B — 보존된 데이터 출처

- realtime_debug.log: lines 9241~9560 (Call 1), 9667~9930 (Call 2)
- DB tx: 9434b22d-... (Call 1), dc2dc916-... (Call 2)
- Loyverse 영수증: 0117 (Call 1), 0118 (Call 2)
- Stale tx 검증 쿼리: `state='pending' OR state='fired_unpaid'` ORDER BY created_at DESC

한 줄 결론: 두 통화 모두 핵심 fix (10개) 통과. 잔여 Gap 8개는 ~4 founder-hours batch fix로 다음 세션 완료 가능. Frontend Claude 영역 충돌 0.
